

S1:

General Data Extraction Given Prompt (used for all 2D plots):

“Extract all quantitative data points visible in the plot. Return the output as a list of (x, y) coordinate pairs. Do not infer or smooth missing values. Use the original axis scaling shown in the figure. Return only structured data.”

Complex Figure Prompt (multi-panel, 3D, contour, or isopleth plots)

“If the figure contains multiple panels, identify and label each panel separately. If the figure includes 3D surfaces, contour maps, or isopleths, extract the visible grid, contour levels, or data points presented. Return a structured representation organized by panel or data layer.”

Error-Handling and Partial-Extraction Prompt

“If you cannot extract some portions of the figure due to visual complexity or occlusion, return the structured data that can be extracted reliably. Do not hallucinate or fabricate missing values.”

Clarification Prompt 1

“Please try again and return only the numerical data points exactly as they appear. Do not add text or explanations.”

Clarification Prompt 2

“The previous response did not follow the format. Return a clean list of (x, y) pairs using the scale shown in the figure.”

Clarification Prompt 3

“Some values were missing. Extract all visible points shown in the plot and provide only the coordinates.”

Figure 24:

Step	Schematic Description (ChatGPT)	Schematic Description (Perplexity)
1	Bio-based epoxy	Mix bio-based epoxy with acetone.
2	Acetone	Create a resin solution.
3	Resin solution	Impregnate rCF mat and RF fabric with the resin solution.
4	Impregnation	Obtain RF prepreg and rCF prepreg.
5	RF prepreg, rCF prepreg	Create a sandwich structure.
6	Compression moulding (Hybrid-interlayer composite)	Use compression molding to form the hybrid-interlayer composite.
